**THE SOUL IN EVERYDAY LIFE**

**DANIEL CHAPELLE**

Argues that contemporary psychology neglects the soul and addresses ways to remedy this.

The Soul in Everyday Life argues that modern psychology has given up on dealing with the idea of soul (or psyche), even though the field is named after it. If psychology wishes to be truly satisfying, it needs to be more than behavioral science, according to Daniel Chapelle. He concludes that psychology can only satisfy the deepest human needs when it can offer a sense of soul in everyday life. He explores ways of restoring this sense of soul to everyday life by examining how talk about something as elusive as the soul is possible and by reanimating a sense for what the notion of soul can mean. Working in the tradition of Nietzsche, Freud, Jung, and Jung’s student James Hillman, Chapelle reaches back into millennia of Western thought to reanimate the dying sense of soul in everyday life and put the “psyche” back in “psychology.”

“Chapelle takes the archetypal psychological way of thinking about psychotherapy and psychology and gives it a novel twist, one derived from a reading of Nietzsche. He moves further in the direction that James Hillman initiated, of speaking of the archetypal rather than the archetypes (in a Platonic or Kantian fashion). Chapelle is quite brilliant, in shifting from believing in archetypes to seeing archetypally. He provides fresh insights and connects them to one’s everyday life, and there is a great deal of therapeutic wisdom in this book, in the way that Chapelle develops Nietzsche’s thought of the eternal return of all things. It becomes a celebration of the ordinary and how extraordinary the ordinary can be. Chapelle’s is a fresh and original voice.” — Robert Kugelmann, author of The Windows of Soul

**EMBODIED SPIRITUALITY IN A SACRED WORLD**

**MICHAEL WASHBURN**

Presents an account of human development from a depth-psychological, transpersonal perspective.

Anyone seeking a deeper understanding of human spirituality will find something of value in Michael Washburn’s new book. Drawing on a rich variety of psychoanalytic, Jungian, and existential-phenomenological sources and on both Western and Asian spiritual texts, Embodied Spirituality in a Sacred World provides a theoretical foundation for the idea that human development follows a spiral path. Washburn shows that ego development early in life requires us to turn our backs on original sources of our existence and, therefore, that spiritual development later in life requires us to spiral back to these sources on the way to whole-psychic integration.

“Michael Washburn’s ability to integrate the central findings of psychoanalytic, Jungian, and transpersonal psychology has enabled him to work out a comprehensive and convincing account of spiritual development. Embodied Spirituality in a Sacred World, his magnum opus, is an impressive overview of how the spirit expresses itself at every stage of the life cycle and in all the areas of experiencing that make us human.” — John Beebe, Chairperson of the Committee on Spirituality and the Psyche for the International Federation of Psychoanalytic Education and author of Integrity in Depth.

Michael Washburn is Professor of Philosophy at Indiana University South Bend. He is the author of The Ego and the Dynamic Ground: A Transpersonal Theory of Human Development, Second Edition, also published by SUNY Press.

“A careful reader will find self-reflection and ‘soul-searching’ made relevant again.” — David Appelbaum, author of The Delay of the Heart

Daniel Chapelle is a practicing psychologist with a background in theoretical and philosophical psychology and the author of Nietzsche and Psychoanalysis, also published by SUNY Press.
LIVES IN SPIRIT
Precursors and Dilemmas of a Secular Western Mysticism
HARRY T. HUNT

Explores the roots of modern transpersonal psychology and spirituality through psychobiography.

Lives in Spirit explores the dynamic conflicts that both energized and distorted the spiritual development of key precursor figures of a contemporary secular or "this-worldly" mysticism. With its historical roots in the early Gnostics and Plotinus, this characteristically Western spirituality re-emerges with the secularization and loss of traditional religious belief of modernity. The lives, works, and direct experiences of Nietzsche, Emerson, Thoreau, Jung, Heidegger, Gurdjieff, Crowley, and contemporary feminist mysticism are considered in terms of transpersonal psychology (Almaas), the sociology of mysticism (Weber and Troeltsch), and contemporary psychoanalysis (Winnicott, Bion, Kohut). Spiritual or essential experience is seen as an inherent form of human intelligence, which while potentially and even increasingly impacted by personal dynamics and social crisis, is not reducible to them.

“Harry T. Hunt’s informative and insightful study of ‘inner worldly mysticism’ gives a cogent discussion of the kind of mystical inclination that arises in our secular culture and the pitfalls inherent in such spiritual forms. His first-hand familiarity with the Diamond Approach gives him the depth and breadth to use some of its concepts in contextualizing both the achievements and limitations of influential figures such as Plotinus, Nietzsche, Jung, and Maslow (in a way that clarifies modern forms of Western spirituality).” — A. H. Almaas, author of Essence With the Elixir of Enlightenment: The Diamond Approach to Inner Realization

Harry T. Hunt is Professor in the Department of Psychology at Brock University. He is the author of On the Nature of Consciousness: Cognitive, Phenomenological, and Transpersonal Perspectives and The Multiplicity of Dreams: Memory, Imagination, and Consciousness.

THE GREAT ADVENTURE
Toward a Fully Human Theory of Evolution
DAVID LOYE, EDITOR

Foreword by Mihaly Csikszentmihalyi

Outlines how a new working partnership between psychologists and evolutionary systems scientists can help create a more humanistic evolutionary theory.

Working to achieve the dream of the great spiritual and scientific visionaries, an international and multidisciplinary group of advanced evolution theorists explores whether a new morally-sensitive and action-oriented theory of human evolution can help guide our species through troubled times to reach a higher plateau for humanity. The Great Adventure probes how chaos and complexity theories, new brain research, studies of child development, new theories of creativity and consciousness, and other neglected social and systems science discoveries cumulate to reveal a new full-spectrum, action-oriented theory. The book outlines how a new working partnership between psychologists and evolutionary systems scientists can meet a pivotal challenge for the twenty-first century. In addition to describing how to build such a theory, the book includes outlines for distance learning studies.

“. . . the themes introduced by the authors are likely to be among the central ones of any new world-view. . . . David Loye’s central insight, which motivates this book, is in my opinion right on the money. The organizing principle of the new faith—a faith of human beings about human beings—is evolution itself. Not the traditionally taught evolutionary scenario dominated by competition and selfishness, but an understanding closer to the original Darwinian one that sees cooperation and transcendence of the self as the most exciting parts of the story.” — from the Foreword by Mihaly Csikszentmihalyi

David Loye is co-founder of The General Evolution Research Group and Vice President of the Center for Partnership Studies. Among his books are the award-winning The Healing of a Nation; The Leadership Passion; and The Sphinx and the Rainbow.

DREAMING AND THE SELF
New Perspectives on Subjectivity, Identity, and Emotion
JEANNETTE MARIE MAGEO, EDITOR

Anthropological perspectives on dreams around the world.

Drawing upon original fieldwork, cultural theory, and psychological research, Dreaming and the Self offers new approaches to the self—particularly to subjectivity, identity, and emotion. Through an investigation of dreams in various cultures, the contributors explore how people as subjects actually experience cultural life, how they forge identities out of their cultural and historical experiences, how the cultural and historical worlds in which they live shape even their bodily habits and responses, and how the person as agent responds to and imaginatively recreates his or her culture. These essays demonstrate that dreams reflect tellingly on topics of great currency in anthropology, such as how people personally manage postcolonialism, transnationalism, and migration. Actual dreams are examined, including dreams of Samoan young people about race; of a Haitian priestess about vodou deities; of a Pakistani about spiritual teachers; of psychoanalytic clients in Los Angeles and San Diego about cars, witchcraft, and sex; and of a young Balinese mother about a neglected dog.

“This outstanding anthology promises to propel the anthropological study of dreaming in important new directions. Indeed, researchers who assume that psychology and cognitive neuroscience are the primary disciplines of dream investigation will likely be surprised at the thought-provoking and critically acute discussions in this book.” — Kelly Bulkeley, author of The Wilderness of Dreams: Exploring the Religious Meanings of Dreams in Modern Western Culture

Jeannette Marie Mageo is Associate Professor of Anthropology at Washington State University and the editor of several books, including, most recently, Power and the Self. She is also the author of Theorizing Self in Samoa: Emotions, Genders, and Sexualities.

COMMUNICATION BEST PRACTICES AT DELL, GENERAL ELECTRIC, MICROSOFT, AND MONSANTO
DONALD P. CUSHMAN AND SARAH SANDERSON KING
With a chapter by Ted J. Smith III and William C. Adams

Highlights successful communication practices at Dell, General Electric, Microsoft, and Monsanto.

Through case studies of communication best practices at Dell, General Electric, Microsoft, and Monsanto, this book provides specific and powerful theories for leadership, marketing, and stockholder communication. Best practice limitations are also revealed in the cases of IBM, the Bumper Works, and Asea Brown and Boveri, where organizational learning, a firm’s timeline, and corporate culture made implementation difficult. Taken collectively, these case studies suggest several ways in which benchmarking can become an important research methodology and theorist tool for understanding excellence in organizational practice.

“The book’s greatest strength is its focus on how some of the best corporations communicate. Such an approach is a fruitful way to link theory and practice in the field of organizational communication, a field of study that desperately needs such bridges between theory and practice.” — Branislav Kovacic, editor of Emerging Theories of Human Communication

Donald P. Cushman is CEO of The Cushman Group and Professor Emeritus of Communication, University at Albany, State University of New York. He is also the codirector of the SUNY series, Human Communication Processes. Sarah Sanderson King is CFO of The Cushman Group and Professor Emerita of Communication at Central Connecticut State University. Together they have written many books, including Excellence in Communicating Organizational Strategy, also published by SUNY Press.
